

New Lawn Installation Instructions

1.

Prepare the soil for the lawn, ensure good drainage. Level the site and roll until firm

2.

Lay out your Lite Edge to design the shape of your lawn. Curves are easily created by snipping through the back of the base of the edging. Pin the Lite Edge in place if necessary using staples (supplied separately)

3.

Once the Lite Edge is in position, level the indentations with lawn sand.

4.

Lay the turf rolls in Brickwork pattern, trimming neatly to fit slightly proud where the turf meets the edge. Finally, water well.

5.

Once the lawn is established and the roots have bound the edging firmly in place, with the mower blades set higher than the edging the lawn can be cut as usual.
